One of the most popular datasets on the Food Standard Agency's open data website relates to FHRS (Food Hygiene Rating Scheme) results. They can be found as individual files [here](#) or via the API [here](#). FHRS ratings are collected and collated by each of the 392 local authorities in England, Wales, Scotland and Northern Ireland.

Spending over £500

Under the [Local Government Transparency Code 2015](#) the Council must publish details of all spending over £500. This has to be done at least quarterly, however we aim to publish the data more frequently.

All the files are available on [GitHub](#), you can [download them all as a ZIP file](#), or the individual files are shown below. To save a single file, right-click on the file name and choose "Save link as...", "Save target as..." or similar.

Data Mince

- Population
- Business
- Employment
- Earnings
- Deprivation
- Geography
- Admin boundaries

We'll update this periodically as we find new and useful things to add to it, but for now here are the basics:

- population,
- deprivation
- economic activity.

All of the data we use here is published under the [Open Government Licence](#) as open data.

Looking at population variation

We always find it useful to look at the distribution of ages rather than the absolute values; the shape of a place's age profile tells you a lot when you compare it to the wider area. For example, Exeter and Plymouth stand out in this chart because of the much higher numbers of resident young people due to the universities. Torbay on the other hand has a profile skewed towards the older age ranges, as many people retire to the area.

Use the dropdown to select different Devon districts.

Source: [ONS population estimates](#).

If we were looking at something like vulnerability profiles, then both groups would be of interest. Outbreaks like the coronavirus are particularly concerning for the elderly and anyone with an underlying health condition, but young people are by no means immune. In fact a university environment can carry extra risks, e.g. dorms, house shares, group tutorials and lectures in spaces that see a lot of use.

Population estimates 2019 (ONS)

District:

Economic vulnerability and differential impacts

Health isn't the only vulnerability factor; for many people self-employment, freelance and contracting work and zero-hours contracts have become a standard part of their income generation. To take a look at the potential numbers of people

These charts show two different attributes of the UK Business Counts data; the breakdown by legal status, which gives us the proportion of sole traders in a district, and the size band by number of employees so we can see where there's a high

Public Health Dashboard

Introduction

The purpose of the dashboard is to support local decision-making by bringing existing comparative data into one place and making it accessible and meaningful to a wide audience.

The Fingertips-associated profile contains the component indicators that are used to generate the summary ranks. They are split into the following domains:

- Best start in life
- Child obesity
- Drug treatment
- Alcohol treatment
- NHS Health Checks
- Sexual health services
- Tobacco control
- Air quality

By accessing the Fingertips-associated profile, users can utilise the various functions of the Fingertips platform, such as trend analysis and the ability to compare indicators.

Recent updates

November 2020

The following indicators have been updated:

- Smoking status at time of delivery
- HIV testing coverage, total (%)

October 2020

The following indicators have been updated:

- Cumulative percentage of the eligible population aged 40-74 offered an NHS Health Check
- Cumulative percentage of the eligible population aged 40-74 who received an NHS Health check

September 2020

The following indicators have been updated:
